
localhost server

Posted by alejandromx - 2006/06/23 13:35

hi, i'm traing to install blastchat on a intranet server with this domain localhost, but on the registration says: "Server already registered or server name already exists", so any help????
thanks

On registration form, you have to select checkbox "Itranet server/website" which will indicate that your site is on intranet (localhost, 127.0.0.1, 192.168.x.x and other)
