
Improve Smileys processing [SOLVED]

Posted by Royal Trude - 2008/03/15 10:20

This is a minor feature bugging us finny speaking folks -- we use the ':' character a lot in written language, like "Blastchat:lla" which gets translated to Blastchathttp://www.blastchat.com/components/com_fireboard/template/default/images/english/emoticons/love.gifla

Not really readable, is it...

Any chances to modify the smiley translation a bit, for instance so that a space character is required in front of the ":" character, unless it's in the beginning of the sentence. See what I mean? Come on try it yourself, and come see us where we are, you know the place....
