
Incorrect security code

Posted by bawilink - 2008/08/14 12:51

Chat was working fine. All of a sudden; all my registered users are getting incorrect security code. None Registered can chat fine.

Tried the complete reinstall to no avail.

When i deleted the account from blastchat I get a message that I am not authorised to alter the table.

Help!

we were improving security and for about 2 minutes this error was visible. But it was quickly detected and fixed. You should not have this problem now at all. Is this error visible even now?
